Dear patients,

I am available for in person appointments on Mondays and Thursdays but am still no longer seeing patients with fever, respiratory symptoms, or any COVID-related concerns in the office. I will continue to offer telemedicine visits as an option for any visit that does not require an in-person exam. I am also able to help facilitate COVID testing or provide home test kits for those wanting/needing testing that are not able to get a test through the health department. If you are seen in the office, masks are required and we ask that anyone entering the the clinic check temperature either prior to entering or immediately upon entering (a contactless thermometer is available at the front desk). I will do my best to take patients back promptly to avoid prolonged waiting, but please understand that sanitizing between patients may take extra time.

In health,

Stacy Bowker, ND
